- Updated on July 11th, 2019. This table will be updated in line with newest firmware update and is subject to change without prior notice.
- For cameras listed in the table, photo taking, video recording and zoom control can be realized via the stabilizer. Grip control and app control are unavailable for a number of Sony compact cameras and mirrorless cameras. Canon EOS M50, M5 slightly interfere with the roll axis motor during setup but it won't affect the proper function of the combo. Camera cages are needed to add extra weight for balancing Sony DSC-RX0. For Sony cameras, with CRANE-M2, please switch between video mode and photo mode via your camera.
- Some Sony, Panasonic and Canon mirrorless cameras can be physically balanced and stabilized with the compatible lenses listed above on CRANE-M2.
- Zoom function of CRANE-M2 is not available on HERO5.
- A wide range of smartphones can be physically balanced and stabilized on CRANE-M2 with the phone holder provided in the package. Video recording, photo taking, zoom as well as other features can be realized on your phone via ZY Play.
